

Tailoring SYSPRO

Fact Sheet

SYSPRO's power-tailoring enables you to personalize, tailor and configure the system to better suit your individual user requirements, streamline your business processes and enrich your experience.

Tailoring SYSPRO incorporates a number of facilities and features and can be as simple as rearranging fields, to building an application to automate a process and apply company rules:

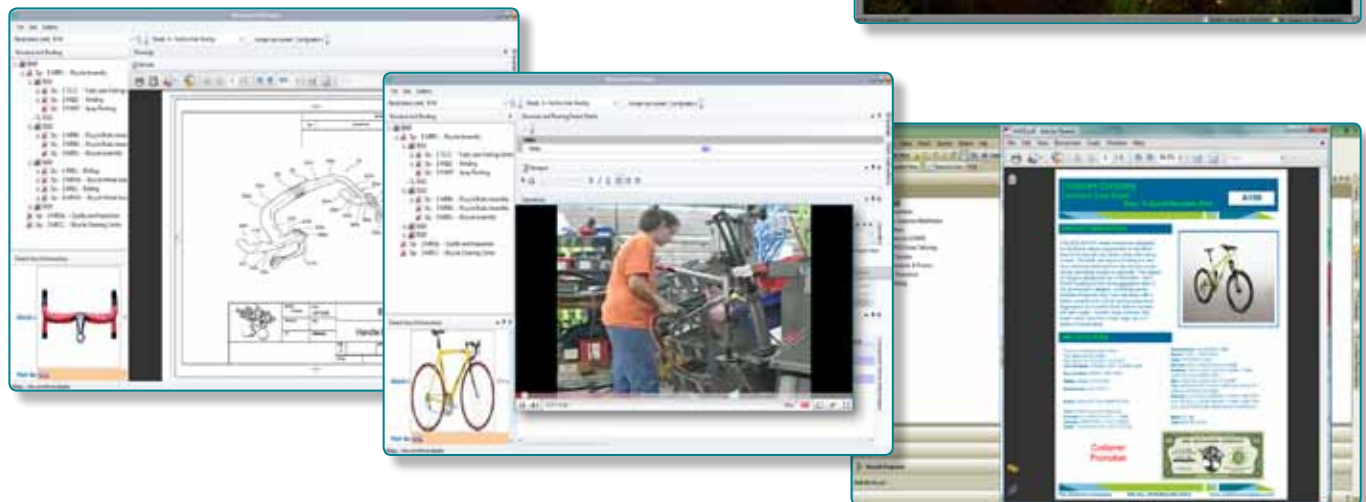

- SYSPRO's innovative, highly configurable user interface (UI) allows users to easily modify the look and feel of any application and extend business functionality. The UI is designed to adapt and change as requirements evolve, giving you the complete freedom to view required information without the need for programming skills. By using Microsoft Office component technology, SYSPRO provides a universal and familiar interface.
- Users can draw on 'templates' to build applications or create new applications written in any .NET language that can be implemented into the core SYSPRO product.
- SYSPRO's powerful form-tailoring provides control over the appearance and behavior of forms without the need for specialist skills. For example: Forms can be configured to display additional data automatically, such as CAD drawings associated with stock codes; insert an editable/read-only notepad against any key field; remove fields; control/streamline data entry, through configurable input masks and case settings.
- Administrators can use sophisticated development tools such as Visual Studio to build and deploy .NET applications as a seamless part of the SYSPRO applications. Once these .NET applications reside on a central server, they can be deployed to the client computer automatically as required.
- System-wide personalization streamlines the implementation of company-specific standards, such as rewording default field captions to align with company terminology, while role and user-based personalization simplifies the modification of user interface elements, such as menus, toolbars and forms.

Tailoring SYSPRO is:

- Version independent
- Easy to implement without the need for technical skills
- Applicable at enterprise, company, role and user level

Tailoring SYSPRO provides:

- A flexible and adaptable user interface
- Integration to external process and disparate systems
- A cost-effective extension to SYSPRO feature set
- Improved efficiencies with greater interaction between users and the system

The end result is a highly configurable system designed to adapt and change as requirements evolve.

The Facts

The Benefits of Tailoring SYSPRO

- Personalize your work space by tailoring menus
- Streamline company specific standards and processes through system wide personalization
- Protect your business processes (and your data) with security settings
- Add and remove functionality from display and entry forms without the need for specialist development tools or skills
- Find information quickly and streamline data entry by rearranging the screen layout
- Increase productivity using Quick link and hyperlinks to access/view additional information
- Control the appearance and behavior of display and entry forms
- Modify the look of fields by changing fonts, colors or built-in themes
- Use associated panes to provide links to relevant information from any application
- Create your own associated panes for use by other users as required
- Use a form's mini toolbar to make quick changes to the appearance of the form.
- Change the overall look of the SYSPRO application by applying a pre-defined/user-defined 'skin'

Tailoring SYSPRO Features

- Uses components developed to meet Microsoft Office 2007 UI Design Guideline specifications
- A sophisticated syntax editor for the VBScript IDE
- Add a notepad to any application or key field
- Customized panes enable user-designed forms to display data in listviews, graphs, web pages or PDF documents, using business objects to retrieve data
- Associated panes can be inserted directly into any application
- Ability to create your own associated panes
- Display SYSPRO's main menu and toolbar as a ribbon bar
- Change the behaviour of any toolbar control using VBScript
- Fully customizable toolbars and menus at operator/role level
- Administrators can add/remove functionality from any application.
- Add actions to a form e.g. launch a SYSPRO program or, use VBScripting to perform a web service request on another computer.
- Defining your own field-level help
- Inserting multimedia objects directly into a form
