SYSPRO On the Go
Apple® iPhone® application

SYSPRO On the Go Apple iPhone application is a business application which provides instant and secure access to information about your customers, suppliers, inventory items, contacts and other key business information.

Through this application, which is available for download from the iTunes store, SYSPRO users have secure access to SYSPRO data anywhere in the world via the iPhone (the application also works on the iPad).

The application has been designed to connect to the application server using a Windows Communication Service (WCS). The application is configured out-of-the-box to connect directly to a SYSPRO Web server running at SYSPRO head office and will access the standard SYSPRO demo data for the Outdoors Company. Thus, within a few minutes you can have the SYSPRO On the Go application installed on your iPhone/iPad and be up and running.

Using the SYSPRO On the Go iPhone application
- Search for customers or suppliers and connect to them via email, text message or phone
- View and create contacts on your iPhone
- View inventory availability including images of your product
- Find directions to your customers or contacts using maps
- View company executive information using graphs and charts

Requirements to run the SYSPRO On the Go iPhone application:
- SYSPRO installed on a server
- The SYSPRO iPhone service running on the same server as SYSPRO
- Licensed SYSPRO e.net Solutions (contact your local SYSPRO office for more information)
